ABSTRACT

The aim of this study is to adapt and measuring the validity and reliability of Career Maturity Inventory (CMI) created by John E. Crite. The goal of this research is a psychological inventory to measure the senior high school students' career maturity that already tested in Indonesian culture. The participants of this research is 160 senior high school students in Jakarta with the sample comes from SMA Kartini Jakarta and SMA 109 Jakarta. The research shows that only 30 items selected of attitude scale of CMI and 50 items selected of competency scale of CMI. The reliability for attitude scale of CMI is 0.708, and for competency scale of CMI is 0.702. This results tell that CMI can be used as a tool in measuring the career maturity.

Key words: *career maturity, Career Maturity Inventory, career planning*
