Design System analysis of linear regression and correlation of Harddisk prices and the dollar prices Using Visual Basic 6.0

Abstract:
In scientific writing the author only discusses this regression analysis and general linear correlation which describes the relationship of two variables as the price of hard disk and Y variables as the dollar price of the variable X. The purpose of this scientific writing is to get the results of regression analysis equations and simple linear correlation to make a prediction or a more accurate estimate to assist the suppliers or the public to know the price level hard drive on the market to determine the future activities more profitable.
