Abstract:

PT. Tuntex is a company engaged in the textile, in the process of production of PT. Tuntex uses three types of raw materials Wool, Foy (FULL ORIENTED yare) and Poy (Pree ORIENTEDYARE) three types of these materials have a variety of types which will be combined with each type of different raw materials becoming a cloth with the flexible nature of berpariasi. The type of yarn that will be used is Foy, because of the string can not be pulled or wrinkle that can produce a strong fabric. Meanwhile, Poy yarn types can be processed into a flexible material and soft no heat easily, therefore the two types of raw materials can be incorporated in the processing will produce the best quality fabrics.
