**Abstract:**

This writing describes the Application Development Psychology Information Hyperactive Child as a source of information which at the present time a child is hyperactive children tend to be equated with active. This condition is very difficult to explain because many normal children who constantly moving. But the hyperactive child is never quiet and no one locked their attention, whereas the tendency of children to be active have a smart kid. The purpose of the presentation is that we can gain a broader information about the special treatment for hyperactive children. While this kind of knowledge about the psychology of child development information is still very minimal hyperactive. To the writer wants to display them in computerized form by using Microsoft Visual Basic 6.0. by presenting it in the form of computerized authors hope to provide ease of information to parents in particular knowledge, which has a hyperactive child.
