Keywords: Payroll Administration, Visual FoxPro 9.0

Abstract:

The increasing administrative activities at PT. Main Solid Archipelago and the growing need for a wide range of information about personnel, especially the writer trying to help create a system of personnel administration at this company. In a payroll system that has not used the application must be very difficult when to seek employee data or files related to personnel and payroll. This will make the system slow, errors caused by wrong at the time input and for different data transfer with the input. By using the proposed payroll applications, particularly for employee data collection, data entry is expected to be in accordance with the expected output, so that the mistakes that usually occur can be suppressed to a minimum and the process was much faster.

With the new computerized system, expected flow of information can move faster so that the efficiency and effectiveness of the work can be achieved to the maximum extent possible.
