Keyword : book sales system

Abstract:
In a company or organization that wants its business continues to grow, the success of the company's business development is a measure of the success of the company. If you want the performance will be maintained, they should be able to mobilize all its operational resources to work optimally. One is the staff who work behind the data and information processing. This is due to make the right decisions requires accurate, easily understandable and fast. This is where the role of a database application program, the provider of computerized data that should be able to provide information within a short and easy to read. The author found the case while working as a translator at a book publisher Akubaca Foundation semimanual still using the system in data processing sales. Therefore, transactions that occur must be managed effectively. The author designed the book sales system that meets their needs using Visual Basic 6-based database.
