Abstract:

In the development of a system is needed Beru full understanding of the old system, this includes all processes. Understanding was the thing mutlask required to plan a new system. In this study, the authors explain the conversion of old systems to new systems using Visual Basic 6.0. With the new system is expected to errors in entering data can be reduced, so that when the process does not have problems. Jobs in making statements on a monthly basis can be done in a timely manner and not dull in its execution. Data and information obtained is always in a state of accurate so that the use of computers can be more efficient and effective and can save substantial operating costs.
