Keywords: Visual Basic, Visualization Dictionary

### **Abstract:**

English-Indonesian dictionary created in the form of recommended books is not practical at this time, because these days everyone wants something practical and instant especially for those who have something to do.

This application program is a form of visualization dictionary using Visual Basic 6.0 programming language from traditional dictionaries that can be used. In addition to the display interface that is made as attractive as possible, this application also displays the search word in the English language more easily and quickly, so you can help learn the language with more fun and easy. Also in this program also have the addition and removal of said facility so selal up to date.
