**Abstract:**

The financial report is a product of the end of the accounting process that is used as a decision determining whether external or internal.

The financial statements consist of a list of the profit - loss of capital and balance sheet changes. The financial report is closely related to the transaction in a way so as to be worthy of a report to be presented and meet the demands of stakeholders.

On the application of financial reporting have created penulias three forms. On the main form to display the form of processing a forecast, daily transaction journal form, displays the form of a report on the form and for printing reports. In the form processing estimates are used to enter a name and its nominal estimates. Daily transaction journal form used to enter daily transactions.

To the officer who makes the financial statements must understand the basics of accounting, how you can operate the existing Windows operating system and has a minimum specification of hardware and software.
