Abstract:

The use of computers in our lives has been very widespread and popular in the community. Not only limited in the work environment, but also in everyday life. In corporate environments, computers are tools that are absolutely necessary in order to achieve competitive advantage, especially before the era of free markets. On a freight forwarder company needed a computer application programs such as program input goods, the customer input program, the program deletes items, the program deletes the customer, program editing articles, edit the program customer, the transaction program, the program reports and receipts and all these programs the program may use the program dBase application. By using a computer application program, the company will gain in terms of ease of filing, preparing reports, creation of supporting documentation and the ease in running the business. The development of computer hardware technology, supported by the rapid development of hardware techniques enable the emergence of applications that are not possible before and the making of the application programs become easier and faster
