### **Abstract:**

Durian is one of the Indonesian native fruit. Many people are familiar with the durian. Durian with the peculiarities of form, taste and smell of this fruit causes many people liked.

However, naming duria bark quite difficult for the novice investor, this is because the durian growers need to know how the signs of pests and diseases and to overcome them quickly and appropriately.

This application is made for ease in detecting pests and diseases in durian, this application is one of the development of artificial intelligence. In addition to detection of pests and diseases in durian, this application also provides solutions to problems arising durian crop.

This application is created using Visual Basic 5.0 programming language, with the intention that the resulting view is User-Interface.
