Keywords: Information System Design

Abstract:

Today's progress has touched all aspects of life, including aspects of health care. In order to provide good health services, and the sooner it is not wrong if it is a computerized system should be applied. At the hospital Candaria currently using the system as the elderly, which in addition to the registration section in charge of seeking patient data is also required to make patient data for new patients, then the data is given to the receptionis to be given the serial number checks. However, when relatively few patients is not a problem, but problems arise when total patient increases, so that the registration is required to give fast service and BAUK. For this KKP writing this writer hope to give a picture of the health service and to help computerize the task dari registration section.
