Keywords: Raport Processing System

Abstract:

Teachers have difficulty in processing student rapport value caused by several things including: processing still done manually, the value of report cards are processed consists of many values and the number of students who have calculated the value raport too much, also serving as a homeroom teacher so that the field of study they not only deal with one class but also have to teach another class-the class. Therefore we need a computerized system that can help solve those problems. This system is built using Microsoft Visual Basic 6.0 software, the system begins processing the value of report cards from teachers who enter the field of study students' values into the system, if the teacher is the guardian class so he can fill absences. Then it homeroom at the end of semester report cards can print reports and report cards to fill the book also reports ledger as reports to the Head of School.
