Keywords: Application Distribution Map

Abstract:

At this time, especially Indonesia, the industrial sector should continue to be improved in line with the rapidly evolving technological developments today in order to achieve maximum results in an effort to boost the national economy. One way is by conducting effectiveness and efficiency in the presentation of all data and information industries.

Provision of appropriate information and can be processed in a fast time is needed for investors who want to invest in industrial especially yes on the industrial sector of small and medium enterprises (SME).

Information on industry data that consists of the location of the provinces, industry type, the name of the industry, the main products, capacity, contact persons and others as well as species distribution maps display industry (textiles and shoes) and related industries is very useful for investors in making decisions about the industry suitable to be developed based on the distribution of industries in a region.
