Abstract:

With the increasing development of technology, at this time the computer is not only used as a tool for typing, counting only. Now the computer is used to create images, combine images, and moving images. Where the moving picture that has been merged with the animation is called. Animation, before the computer was developed, has been known in film making. As an example of this is a cartoon, but at the present animated t dapa also used as a means of teaching. Given this, the specific areas on a lesson (Biology), which can not be described directly, it can be seen through this application. So the teacher as a teacher can explain a material and students can more clearly accept or understand the materials given. So the problems that arise in the field of biology teaching in particular subjects can be completed. With this application, so students can learn to understand the materials given, especially in the digestive process as you play.
