Abstract:

Guitar Chord Making Applications Using Macromedia's Flash MX is a guitar chord application which contains information on how to search for basic chords using Macromedia Flash MX, which is packed into an attractive and interactive form made its appearance simple and easy. Expected that this application can help the beginner who wants to understand the basics of playing guitar and seek additional information about the search for the basic chord.

By using Mcromedia Flash MX, this application is the combination of layers and elements of the picture frames, text and songs, which are summarized into a single application into a form that is expected to easily be used by anyone and is made as attractive as possible while using this application.

By simply clicking on one option from the menu then the user will immediately obtain information on the basic guitar chords.
