Abstract:

Currently the use of computer is mostly done by the company or organization is as data storage media and information. One such utilization, the authors create a database in the form of presenting information to assist prospective workers HRD in conducting recruitment.

PT. Nusakita Cemerlang is a manpower outsourcing company, where the company provides outsourced workers who are skilled, educated, and trained in accordance with the needs of the client / customer. Currently the database of existing prospective workers are still stored in the HRD manual. This will complicate the search process of HRD in a quality workforce with a short time and frequent labor kerangkapan prospective data for two different jobs.

From the description above, the authors propose to provide a translation of the manual data storage to be computerized. This is expected to help the HRD in the process of information seeking candidates for employment and current job vacancies.

We make this database is expected to help HRD at PT. Nusakita Cemaerlang in the recruitment of new candidates for employment.
