Keyword : Website, Application, Content Management System (CMS), phpWebSite, Administrator

Abstract :

Nowadays the use of Internet services as a means to obtain information more widely used. This is because the internet has a very wide range. Internet is ideal when used as a means of delivering information or promotion of an organization or company, to offer goods or services to consumers.

As one of the supermarkets are quite developed nowadays, Supermarkets Save Family in need of a media campaign and information more effectively and efficiently for its customers. Therefore, Save the Family Self-Service website making is intended to facilitate customers to obtain information about various products sold in this supermarket. To build this website, the author uses an application content management system (CMS) called phpWebSite with version 0.8.3, built a Web Technology Group, who came from Appalachian State University in the United States. And with the help of some supporting software.

For the writer, the essence of the making of this website is located on how to build a website (whether it be commercial, social and individual) are attractive and easily managed.

This research aims to encourage students and student Jakara STMIK STI & K in particular, to develop their imagination and their creativity in the world of web design and readers in general, to participate in advancing the world of web design in Indonesia.
