### **Abstract:**

Microsoft Visual FoxPro 9.0 is a software used for data processing. Data processing done with the database as a place to store data.

As payment restaurants in general also has relationships with exit and entry of articles and reports. To control the exit and entry of goods and facilitate in making the report used language Microsoft Visual FoxPro 9.0.

With this application, it is expected to be useful in improving the performance of employees. This is because the performance of the employees can not be separated from data and information quickly and accurately so that the time it takes to be a little more.
