Keyword : foxbase applications, data processing, financial reporting

Abstract:

With the completion of the report KKP / PP, then the author can draw the conclusion that the use of data processing applications and financial statements, then the process can be done more quickly and accurately than the manual method, either in search of data and calculations.

The research found that the flow of information in the pharmacy still not properly organized, is still going on disinformation in controlling the processing system. Where there is a responsible party should be looking for data - data that is required every related party. Thus, this causes the ineffectiveness of time. So the author tries to advance treatment system which requires that every party concerned is not directly reported on the details - details that occurred with the method of collecting data in a structured transaction via an appropriate route assignment.
