Abstract:

With the rapid progress of technology development it will bring positive impact to the other, as well as problems that exist show a package system can give more meaning to that use, because the package design system or the new system can reduce the inefficient nature of work time or still manually.

From a collection of some procedures that are written separately then we will get a new system that will be very helpful, because after all rolled into one and run then this will provide optimal capacity, because all the needs and conditions and facilities that are available from the user of the system.
