Abstract:
Tuition payment system has a lot of data and any time required, and obviously this will take quite a long time if done manually, also frequently encountered problems or weaknesses that exist, which are not orderly recording data , has not been sorted or composed neatly and when payment has not done a good procedure, so that any time the data required will require a long time in the query.

Because the above problem, I am interested to try out ideas so that problems can be solved quickly and accurately. At this writing the author using Visual Basic software because it has facilities that support in making applications programs, with the writer trying to create a computer program on the CMS Administration System Design on SMK XXX.
