Keywords: Booking Application Sablon, Visual Basic 6.0

Abstract:

Already there is no doubt anymore that the use of computers at this time is needed. Not only the big companies, medium companies and small companies, need a computer to support that in running its business.

By using Microsoft Visual Basic 6.0, the authors tried to make an application to simplify the design process booking transactions silk screening on British Indie Banner. With komputerisasinya process the transaction, expected to be stored reservation data properly and can accelerate the search process the data and to improve the quality of care.
