Abstract:

Today's increasingly rampant activities of mountain climbing conducted by the teenagers, both sons and putrid. The frequency of these activities will appear prominently on each long vacation in high school and college students. Mountain climbing is one sport in the wild adventure that must have technical knowledge about the terrain, climbing lane, weather, and how to preserve life in the wild. Mountain climbing is not a recreational activity and entertainment, because it eliminates a human life at risk. Disaster that claimed the lives climbers frequently occur, whether caused by natural factors or if the human factor itself. Especially for those who do not have specialist knowledge in sport climbing. In this case, preparation is needed before doing this mountaineering activities. Application is made to provide information about the mountain climbing guide. This application was built using Microsoft Visual Basic 6.0 with the intention that this application can display the character of the user interface or in other words can be understood easily by the user.
