### **Abstract:**

Bhineka Clinic is a clinic that serves the community in the health field. at this moment, in terms of diverse clinical data input manually and many still use the files in the form of files or books. something like this might happen mistake in the data storage and retrieval of data. With this system it is not good to use because the current computerized system is needed in the administrative system at the clinic.

In this scholarly writing explain how the parts in the klink this administration to do the stages in the process of calculation and administration as well as create reports quickly and easily and efficiently. In carrying out the necessary administrative processes as well as good performance for all systems that support those processes that give satisfactory results.

In order that the system can work well done, the writer should try to design the system by taking steps such as by making a chart diagram that is: DFD (Data Flow Diagram), ERD (Entity Relationship Diagram), as well as programs that support the normalization designing the system.
