Abstraction

At the present time the technology has advanced with his street had taken the time to make everything easy to grow and all can be done quickly and precisely. Moreover, with an additional tool in the form of a computer to make all that had been long done more quickly and conveniently. Computer tools can we find anywhere, either in offices or in shops. Like shopping in the sales transactions are still conducted by manual count manualisasi with tools made ineffective because it can inhibit the sales transaction at the time. For example in mahasuri bookstore sales are in the system and making monthly reports manualisasi done, so the data required to support operational processes often experience delays and will be a lot of mistakes, It needs to be made a database on the system sales of books and making its report and it need a program to run the database. So that all can be controlled either in system sales as well as the preparation of reports for each month.
