Keywords: Computerized System, Application Receipt Hospitalized Patient

Abstract:

In scientific research, this writer attempts to solve the problems that occurred in patients receiving inpatient activity. The problem in question is not efficient when carried out activities that inpatient admission at the time of receipt, the officer must write the transaction into several books. Microsoft Visual Basic is very supportive of making an application that can alter a patient receiving a manual system to a computerized system.

Hospital patients receiving application is expected to help improve services, in this case the patient does not need to worry when booking a room.
