Keywords: System, adminisrasi

### **Abstract:**

The development of increasingly advanced technology, especially computers, have now entered a wide range of existing activity areas. The advantage of using computer technology is characterized by speed, precision, and accuracy, as well as ensuring that data will be stored.

The author conducted a study on administrative systems in use at the Clinic Mediros, wherein the data processing still using manual systems. This system has the disadvantage of consuming much time and energy so as not effective.

From these circumstances, the authors intend to provide an alternative in data processing of patients, physicians, and medical treatment, but no longer manually computerized order administrator in performing his job easier and also speed up service to patients after medical examination.

Storage of all data related to the administration system is stored in a database that is well designed so that it can provide the necessary information quickly.
