Abstract:
Amid the current development of information technology, automation and computerization is the one thing that has become a primary need for the community, ranging from the manufacturing process until the data storage is done by computer, without thinking about how risk that arises when there are no responsible parties who use the computer as media to make money quickly, such as theft of data manipulation, data intrusion or even destruction of data by a cracker.

Amid the current technological developments cyber crime continues to accompany any extent to information technology develops, many hackers and crackers who exploit the weaknesses of a computer system using a virus, worm, keylogger or other media used for data theft, therefore, the working system of an operating system and materials that may damage it should be more understandable to the process of data security.
