Keywords: Production Planning

Abstract:

At the end of the writing and review of the CTF / PP is the author concludes that in order to overcome the barriers that exist in this company would have to be a regular planning / job vacancies are arranged to avoid the production course should be supported by accurate data in the planning process and the data itself can the form of reports from each relevant divisions and other information.

By implementing this system design can launch the planning process to regulate / manage the system of production work with we just call and see this program for the solution of every problem. And changing the old ways where there are a lot done in a simple data collection and information that is less clear.
