Keywords: use and exploit internet, internet service provider

Abstract:

Areas of the Internet itself can not be separated from communication techniques, because the Internet is formed with the development of highly advanced communication techniques. Other areas that affect the development of the internet is data communications. Thus although the usefulness of the Internet itself relates to other fields, such as business, education and others.

Internet usage can be very much research, from the project, formerly a military research project. and are quite visible results in the civilian field is marketing, internet marketing engineering where with the right to make our products become famous.
