Keywords: Home Page, Image Map, Frame Target, HTML

Abstract:
World Wide Web is built from a Web Page or known as the Home Page. While their own home page created using HTML language.
To create a Home Page that was good and interesting, of course, we try in any way give a different look than usual, so that makes it look more alive and creating forms an interesting link to be clicked.
No escape from making a link, the writer here tries to minimize access time / download from users that is by making an image that can be divided into several link called with Image Map and Target Frame to make users more easily search and find contents of the home page without having to return to the main menu so that it can save time appearance on a home page.
