Keywords: analysis of transaction authorization for credit card master card holders

Abstract:
The credit card is a kind of payment in lieu of cash has a bright prospect in the future, because with the risk of carrying cash large enough in terms of both security and the amount of cash required at certain moments. With so many banks are Mastercard credit card issuer, then Mastercard create a communication network that is designed to serve all requests authorization from each member. Some of the benefits gained from the existence of this system are rapidly increasing the authorization process manager and the low value of the cost incurred by each card issuer.
