### **Abstract:**

Along with the development of computer technology is so rapid, computers today are not only used as a tool for the job but it can also be used as a medium of entertainment, like listening to music or watching videos, so you no longer need these media.

In the play audio and video via computer media, there are two things to note is used to build computer programs and software that have a facility combines elements of audio and video in one software. Software that can be used vary widely from the simple to the complex which has a high level. Each level in the variation affects the level of satisfaction with the software user. Many of the actual products that can be selected to play audio and video, but distinguished between programming languages with authoring software.
