Abstract:
With the development and advancement of information technology is increasingly sophisticated computer plays an important role in it, let alone a computer equipped with facilities and infrastructure are growing rapidly.
In its activities the computer user can not be separated from the data. The data itself has several types of data. To perform the data transfer then we should do first data type modifiers. In performing data type conversions, many computer users still do not know the lay and how way of doing data type conversions. With this application, the data type modifiers can help our customers in terms of computer transfers the data which will optimize the time available.
