Keywords: Multimedia Application

Abstract:

Since the days of yore, we know that television can replace the radio, the same is true of the DOS-based programming language, the program can not utilize the capabilities of applications that already exist in one program. Programming languages are generally Windows-based languages on object-oriented programming, among others, MS Visual Basic, MS Visual C ++ and Turbo others.

Visual Basic is the operating system operating systems that have the ability OLE (Object Linking and Embedding), which is a collaboration between visual applications. Where to create simple multimedia applications by utilizing the supporting programs such as Active Movie. But for the show. AVI is not using Active Movie directly.
