Keywords: Trade Information System

Abstract:

One of the major factors that support the production is the supply of goods, in addition to the human / labor, machinery, and capital. Duty management arranged for the above factors can work together to produce maximum output with minimum input. Inventories of goods other than as one of the major factors that support the production also is one of asset / capital for the company, it was necessary to have a untu for inventory control, therefore it is necessary to have a control for the inventory.
