Keywords: System Income, Hospitals, discounts, receivables and billing

Abstract:

Association as a booster for the writer to discuss this problem is to compare the writer has gained knowledge during the lecture on STI & K Jakarta with reality in the field, especially in the areas of revenue and receivables as well to meet the requirements in completing course strata-1.

Aim of this study is to assist hospitals in obtaining revenues and accounts receivable effectively and efficiently, and solve the problems and assist management in making decisions.

The research methodology used is the study of comparative literature as a complement to terhadap problems encountered are analyzed as well as field research and interviews with the viewer directly as a liaison group should study with the object being studied.

From the research the authors found several weaknesses in the current system, among others, there are weaknesses in the system of giving discounts to patients who are less able, results delivery charges, and the difficulty of collecting data from existing parts. Because of the weakness is the author suggested to hold a revamping of the current system, by designing a new system.
