Keywords: Information System for Sales, Purchasing and Inventory

Abstract:

Satisfactory service is the key to business done wonderful tourist restaurants. One of the restaurant management efforts to meet these demands is to build information systems that can handle sales, handling of inventory until the purchase of raw materials, so the restaurant will be increasing productivity.

To meet these needs, the author conducted the analysis and design of administrative information system that handles its restaurant sales, purchasing, accounts payable and inventory handling. The research which writer to do is to read books and other reading as a source of information. Moreover, I also do research directly to the field in a way mewancarai the parties involved to get their feedback about restaurant work procedures.

The result is known that the administration system of integrated computer-based restaurant can meet the needs of beautiful tourist restaurant management.
