Keywords: Expert System, Diagnose

### **Abstract:**

Writing is about the ability of a computer system (expert system) in helping a doctor by using reasoning resembles an expert in the field to diagnose urological diseases in humans. This expert system will ask certain questions, diagnosing problems, and ultimately recommend a solution based on the facts and experiences that have happened before that has been incorporated into database. So that later when an expert was dead so his knowledge and experience will still be able to be used by others by using an expert system.
