Keywords: Introduction to the Internet Through Letters and Figures

### **Abstract:**

In introducing the letters and numbers, we need a way to provide comfort and fun to children. Today many media that enable children belajar recognize letters and numbers while playing, so that children can learn with a comfortable and enjoyable. Through this media, electronic media, namely computer expected.

Internet has been very commonly used. Not only the office-office, but also home-school and school-house, even today, the internet has been a lot of rentals are everywhere. The Internet also is not only used by adults, but children also can use the Internet as a means of education and information for him, one by introducing letters and numbers for them via the internet.

For that, need an application to introduce letters and numbers to children that can be used diinternet, so kids can get used to interacting with computers since the early than they learn about letters and numbers. The application development was the introduction of letters and numbers using HTML and VBScript.
