Keywords: MS Access

Abstract:

PT. Euro Star Garmindo is one of the many companies engaged in the garment. The company needed a fast service in processing data increasing reservations. Constraints faced by ole PT was seeking data based on alphabetical order. This is due to still use the recording in data processing and reporting. To the authors offer an alternative solution which is expected to help the company.

Use a computer with a Microsoft Access application is one way that can be used to facilitate the officers in making goods stock reports. For storage data using a computer model of the author of RAM 486 with 8 MB, this is in accordance with the reservation data processed by the company. With the computerization is expected to assist in the ordering of goods production needs.
