VALUE ANALYSIS INFORMATION SYSTEM TEST ON SENIOR HIGH SCHOOL PERGURUAN CIKINI

Dully Faisal, 30494152, Hariyanto, Ir, SKom, MM

Abstract:

Analysis of information systems is to understand the complex system and then make modifications in several ways. The result of these modifications can form a new subsystem or a new component or set of new transformations, in which the goal is to improve the various functions of the system. To change the target system, change the output, achieve the same goal with another set of inputs or to make similar improvements.

The need for fast information systems analysis and accurate research is needed that is by the research literature and conduct field research data and information on the running system.

From results of this analysis is expected to produce an effective work processes and inefficient in terms of continuity of work processes of an organization or institution.
