### **Abstract:**

The Internet is an unlimited source of information, information on the Internet are presented in various forms. One form of information available on the Internet is the World Wide Web (WWW). WWW is a form of multimedia information prepared using language that is Hypertext Markup Language (HTML).

To access the WWW needed a web browser. Web Browser works as a client. When a client requested a file from a server in the form of HTML and also displays information to the desktop in the form of multimedia.

To create a Web Browser needed an object-oriented programming language called Object Oriented Program (OOP). One of these programming languages are Delphi 5. With Delphi 5 is very possible someone can make a web browser, since Delphi 5 support in the Internet-based programming.
