Abstract:
Information systems currently used by many people as information that helps in terms of data acquisition. So also with the management of the stocks in the computer data processing is still a lot of difference constraints with the number of physical goods that are in the field. For it needs to make a management information system in order to facilitate the sale of goods is based on the available inventory in a timely, precise, and accurate. By using a management information system, work will become easier and timely. For that the theory of the strong foundation necessary to support the information.
