Keyword: Packet Data Communication Connection (SKDP)

Abstract:

Data communications in Indonesia, initially using SKDP. Until now SKDP network has reached the cities of Jakarta, Bandung, Surabaya, Medan, Ujung Pandang and P. Batam. Year 1992 is planned to add another 8 Advanced Network Processor (ANP) in Denpasar, Palembang, Semarang, Balikpapan, Yogyakarta, City I (Cawang) and two cities in Kalimantan.

Public switched data network is a data communication facility between the Personal Computer, Personal Computer with the Host Computer and between Host Computer with a packet switching manner shipments, ie per package, in which a long story broken up into packets, with a certain size to be sent.

SKDP further can be explained on the application, periperalnya, the configuration of hardware, software supports, protocols that can be served by SKDP, chargingnya and PAD System (Packed Assembly / Disassembly).

By knowing the expected growth of data communications SKDP Indonesia's growing fast.
