Keywords: Computerized payment systems

Abstract:

Based on research from the current system is still manual, which produced reports sometimes late, this was due to the complexity of data processing that is causing errors and repetitive work in producing the report and the problems that hamper student payment data processing. Therefore, the authors make a new system to ensure accuracy and security and can be more effective for data processing students' payments at the time will come in this era of computerization. Can also be useful in supporting the decision for the leadership.
