Abstract:
KGK MP IAIN Jakarta is a cooperative engaged in the business that provides goods stores and community needs of the members generally. But there are still deficiencies in its management in dealing with inventory records, providing information and report the number of stock items. Therefore it is necessary to design the inventory system at the cooperative.
Based on the analysis and the constraints faced in designing this system is the recording is still done manually, causing difficulty in checking inventory and the long preparation of reports. Hopefully, with this new system can assist the work in accordance with the expectations of the cooperative.
