Keywords: System of ordering goods

Abstract:

The high quantity of daily transactions has also increased the time needed to perform the process of ordering products, so the accuracy and efficiency of time getting the information desired is not achieved as desired. To overcome this, the writer makes the design system, ordering of goods to resolve the issue. By designing the system, ordering of goods it is expected that the problems faced in ordering goods can be solved.

With the goods enter the data item and store data as well as ordering goods transaction into the computer via a customized menu with the transaction process, the ease - the ease which was made on this system is more biased in time and cost efficiency, good accuracy in the process of calculation, calculation of goods data and other bias is reached.
