Keywords: Material Supply

Abstract:

Raw materials inventory system at PT.Comfort Aire Aneka Technic still menggunakan sistem manually, which causes the system procedures have shortcomings and weaknesses that have not been able to optimize vehicle is in providing information quickly and accurately.

The purpose of this paper is to design a computer-based information system that focuses on raw materials inventory information system located on the logistics of PT. Comfort Aire Aneka Technic . So that can be developed a system that could expedite the process of service and information needs for management and stakeholders. This system can also produce fast and accurate information in the form of reports and data.
